

ANS iFax – Internet-based Faxing Data Sheet

A TOTAL DESKTOP SOLUTION FOR SENDING AND RECEIVING FAXES DIRECTLY FROM THE DESKTOP

Enhance business resources with an enterprise-wide Internet fax solution that combines the benefits of email to fax and fax to email services.

To maintain a competitive advantage, companies must effectively communicate with employees, partners and customers quickly and reliably. ANS iFax, powered by EasyLink Services™, provides the answer through secure and reliable electronic document delivery over the Internet. Electronic document delivery services maximize productivity and minimize expenses by delivering crucial business documents over your existing Internet link to recipients whenever and wherever they're needed -- resulting in better time- and cost-management.

The ANS iFax product consists of 2 components:

1. *Email to fax out-bound solution* allows desktop users to send faxes anywhere in the world from their existing email system.
2. *Fax to email in-bound solution* enables desktop users to receive faxes electronically in their email as an attachment (TIFF or PDF format) wherever you can access email, and for subsequent storing, retrieving and sending.

Sending and receiving documents over the ANS iFax global IP network, powered by EasyLink, offers substantial advantages to expand your network without expanding your budget. There is no additional hardware and software to buy, install, maintain, or upgrade. Scalability is a snap, with virtually unlimited fax capacity and automatic bandwidth on demand. Other value factors include 24/7 system support, a completely multi-redundant network for enhanced security and reliability, and continual technology upgrades.

Business Benefits

- Utilize your existing IT investment and resources
- Easy deployment and implementation for multiple locations and platforms
- Multi-redundant system provides confidence that faxes will be delivered
- Eliminates the need for multiple fax servers, software and phone lines
- Limitless capacity without the cost and installation of software and hardware
- Manage fax and email message communications from existing desktop email application
- Better use of human resources and productivity by eliminating manual fax procedures
- In-bound service provides confidentiality of documents and a never busy fax number
- Account Management Center provides real-time monitoring and reporting for both administration and users to view fax traffic online

End User Benefits

Sending a Fax: out-bound

- Attach multiple documents to a single fax transmission
- Eliminate printing documents and the hassles of manual fax procedures
- Send faxes to multiple recipients simultaneously in just minutes
- Keep an electronic record of all fax communications on your hard drive or in your email client

Receiving a Fax: in-bound

- Users are provided an individual in-bound fax number for direct delivery
- Receive multiple faxes simultaneously -- in-bound line is never busy
- In-bound fax documents can be deleted, printed, forwarded or stored electronically on a hard drive or in your existing email client such as Outlook
- Eliminates manual scanning of documents for electronic storage
- Access and retrieve faxes anytime, anywhere email is accessible
