

Web Hosting **Personal, Reliable and Highly Affordable**

What is Website Hosting?

A website is simply a collection of files that reside on a computer connected to the Internet. When someone visits a website, they are actually contacting that computer, and that computer (called a Web server) gives the visitor the files they want to see.

Why Host With Advanced Network Solutions?

Companies host their website files with Hosting providers like Advanced Network Solutions because they lack the computing power to service all of the visitors to their site. A website also needs a tremendous amount of Internet bandwidth as well as a staff of IT personnel to manage the environment.

For a small monthly fee, ANS provides the high-powered servers, Internet bandwidth, technical support, a stable environment, 24X7 response service, and a host of other features for a fraction of the cost. Advanced Network Solutions' media servers can also provide streaming video and audio, and our application servers provide dynamic content and electronic commerce capabilities.

ANS Website Hosting Capabilities:

- Personal customer service and support
- 24X7 server monitoring and support
- Backup servers for fail-over protection
- Secure firewall protection from intruders
- Redundant high-speed connections to the Internet backbone
- Redundant power backup for entire facility
- Electronic passkey security for facility
- Nightly file backups
- Windows 2000, 2003 and Linux platforms
- Static and dynamic website hosting, including ColdFusion, ASP, .Net and PHP

Available Services and Features:

- Database hosting, including Access, Server 2000 and My SQL
